OSBORNE/McGRAW-HILL

Dear Reader:

Steam locomotives were "leading edge technology" when James H. McGraw and John Hill started publishing technical information in the late 1800's.

Finding the best writers of the day, keeping up with every technological leap—and there were plenty of them—publishing the clearest, most informative material was central to McGraw-Hill's popularity then. It still is today, even after almost a hundred years of incredible change.

As a computer user, you know that the "Personal Computer Age" has arrived. You also know that nothing changes faster than computer technology. Getting you up to speed and helping you stay there is what Osborne/McGraw-Hill is about. We are publishers, but we are also part of the microcomputer revolution, committed to the good and useful things these extraordinary machines have put into our hands.

You can rely on our technical staff and high editorial standards to give you the information you need at the level you want it. And you can count on Osborne/McGraw-Hill to bring you the highest calibre of information about personal computers—just as McGraw-Hill has in every area of technology for nearly a century.
